Precision Parts and Remanufacturing

"PPR is committed to consistently deliver high quality remanufactured products, on time, and accurately, through a team dedicated to continual improvement."

LOT INTEGRITY

Maintaining all pieces/parts and lot paperwork with the correct lot throughout the remanufacturing process.

Why PPR must have Lot Integrity:

Each lot is scheduled to meet the customers' needs. The customer orders are not consistent. A single lot may consist of 1 unit or up to 50, depending on the overall size of the customer's order.

To ensure all units are disassembled, remanufactured, and shipped on time PPR must process ALL pieces of all units. Lot Integrity keeps orders (lots) separated during remanufacturing so that pieces are not mixed up or missing.

If PPR does not process orders using Lot Integrity, the units will not be built on time to meet the customers' requirements. Pieces may become mixed up, damaged, or lost which dramatically increases the production time and costs to remanufacture the lot.

It is the duty of each employee to maintain Lot Integrity. All pieces and/or units processed in your department must remain with the lot and the proper paperwork that travels with the lot.

Risk Factors
Shows Leadership

A LITTLE PROGESS EACH DAY ADDS UP TO **BIG** RESULTS

Think Ahead and Prepare-In Oklahoma, August is the hottest month. Apply sunscreen, wear a hat, and choose lightweight, light-colored clothing. Avoid the heat. If possible, stay indoors in the hottest part of the day from 2 to 6 p.m. When you're outside, take frequent rest breaks in cool places. Most healthy people can stay hydrated by drinking water and other fluids whenever they feel thirsty. For some people, fewer than eight glasses a day might be enough. But other people might need more. Drinking enough water keeps the body hydrated, which helps the heart more easily pump blood through the body. It also helps muscles work efficiently. If you're well hydrated, your heart doesn't have to work as hard.
