Precision Parts and Remanufacturing

"PPR is committed to consistently deliver high quality remanufactured products, on time, and accurately, through a team dedicated to continual improvement."

All Managers/Supervisors are responsible to scan products in and out.

Precision Parts' definition of Lot Integrity:

Maintaining all pieces and lot paperwork with the correct lot throughout the remanufacturing process. Or, ZERO pieces or paperwork of any lot mixed with another lot during the remanufacturing process.

Why PPR must have Lot Integrity:

Each lot is scheduled to meet the customers' needs. The customer orders are not consistent. A single lot may consist of 1 unit or up to 50, depending on the overall size of the customer's order.

To ensure all units are disassembled, remanufactured, and shipped on time PPR must process ALL pieces of all units. Lot Integrity keeps orders (lots) separated during remanufacturing so that pieces are not mixed up or missing.

If PPR does not process orders using Lot Integrity, the units will not be built on time to meet the customers' requirements. Pieces may become mixed up, damaged, or lost which dramatically increases the production time and costs to remanufacture the lot.

It is the duty of each employee to maintain Lot Integrity. All pieces and/or units processed in your department must remain with the lot and the proper paperwork that travels with the lot.

We will be having a tornado drill Wednesday October 09th, 2024 at 8:50 am.

Welcome Valencia as our EHS Coordinator
She is excited to join our team and is looking forward to working closely with all supervisors and employees. If you ever have a question or concern, please feel free to reach out to her.
Val will be doing daily audits and training in your area.

We will be holding a Power Industrial Training Class.If you are interested please get with your supervisor or Val to be put on the training list.
